

14 - Roadmap and Versioning

Visor DOM-to-Agent Context Compiler
DOC-14 | 0.1 requirements pack | Generated 2026-06-14

This roadmap document lays out MVP, V1, V2, V3, dependencies, and kill criteria for scope control.

Field	Value
Owner	Rohan PX / Visor project
Audience	AI coding agent, reviewer, future contributors
Status	Draft baseline for MVP build
Decision rule	MVP is local-first, minimal-permission, Chrome Manifest V3, no backend unless explicitly enabled.

Document control

Item	Value
Project	Visor DOM-to-Agent Context Compiler
Document code	DOC-14
Generated on	2026-06-14
Primary goal	Turn raw webpage DOM into safe, structured, agent-ready context.
MVP boundary	Chrome extension, local-only compiler, JSON/Markdown export, privacy redaction, tests.

1. Roadmap strategy

Build the compiler core before expanding UI, cloud, or agent integrations. Each roadmap phase should increase correctness, safety, and integration value without breaking the local-first principle.

2. MVP - Local compiler

Milestone	Deliverables	Exit criteria
M0.1 Scaffold	MV3 extension, popup, service worker, content script.	Loads locally and message passing works.
M0.2 Extraction	PageSnapshot with title, text, headings, links, buttons, forms, tables.	Fixture extraction tests pass.
M0.3 Compiler	AgentContext schema, noise filtering, dedupe, token profile.	Schema valid output across fixtures.
M0.4 Privacy	Redaction, risk warnings, no network calls.	Security QA pass.
M0.5 UX polish	Preview, copy/export, settings basics.	Manual QA pass.

3. V1 - Quality and profiles

- Improved main-content detection.
- Debug inspector with score visualization.
- Site profiles for preserve/ignore selectors.
- RAG chunk mode with stable IDs and heading paths.
- Local context history metadata with clear/delete controls.
- More test fixtures and regression snapshots.

4. V2 - Agent integrations

- Export templates for agent frameworks.
- Action element map usable by browser automation tools.
- Prompt-injection hardening and untrusted content delimiters.
- Optional local LLM summarization mode.
- Developer API inside the extension for trusted local tools.

5. V3 - Cloud/team only after trust

- Opt-in encrypted sync for settings and site profiles.

- Team workspace shared extraction rules.
- Saved context vault with deletion controls.
- API access with scopes and audit logs.
- Commercial billing and usage dashboard only after privacy model is mature.

6. Dependency map

Feature	Depends on
RAG mode	Stable PageSnapshot blocks, heading paths, token estimates.
Site profiles	Storage adapter, settings UI, extractor selector hooks.
Agent action integration	ActionElement schema, selector hints, confidence scoring.
Cloud sync	Privacy policy, encryption design, auth, deletion workflow.
Public store release	Permission audit, privacy policy, security QA, stable build pipeline.

7. Kill criteria

- Do not continue UI expansion if extraction quality is poor.
- Do not add backend if local compiler is not reliable.
- Do not publish publicly if redaction and permission review are incomplete.
- Do not claim autonomous agent capability before action safety is designed.
